Contents

Preface *v*

INTRODUCTION

Chapter 1 Why Quarks? 3

1.1 Hadron spectroscopy 5
1.2 Hadron substructure and scaling 12

PART 1 SYMMETRIES, HADRON SPECTROSCOPY AND QUARKS

Chapter 2 SU(N) Symmetries 17

2.1 Multiplets and quarks 17
2.2 Rudiments of unitary symmetry: SU(N) 21

Chapter 3 Quarks and SU(N) Representations 38

3.1 Baryons 39
3.2 SU(2) representations 40
3.3 SU(3) representations 44
3.4 SU(N) and Young tableaux 47

Chapter 4 SU(6): Quarks with Spin 54

4.1 Mesons 54
4.2 Baryons 59
4.3 Examples of simple calculations 62
4.4 Mass splittings in the hadron supermultiplets 70

Chapter 5 SU(6)×O(3): Quarks with Orbital Excitation 80

5.1 Baryons 80
5.2 Mesons 86
5.3 Mass splittings in $L>0$ supermultiplets 88

Chapter 6 Quark-Current Interactions: Symmetries and Dynamics of Decay Vertices 93

6.1 U(6)×U(6) and SU(6) 93
6.2 $SU(6)_W$ and states in motion with $p_z \neq 0$ 95
6.3 A model with $SU(6)_W \times O(2)_{L,z}$ vertex symmetry: duality diagrams with spin 101
6.4 $SU(6)_W$ of currents 104
6.5 The SU(3) subalgebra of $SU(6)_W$ 110
6.6 SU(3)×SU(3) configuration mixing in the harmonic oscillator quark model 115
6.7 Quark pair creation and $SU(6)_W$ breaking 119

Chapter 7 Electromagnetic Interactions and Radiative Transitions in Explicit Models 126

7.1 Quark spin flip matrix elements 127
7.2 Quark model amplitudes for resonance photoexcitation 131
7.3 Current matrix elements—a general approach 143
7.4 Relativistic models 147
7.5 Electromagnetic interactions in the $^3P_0$ model 155
7.6 Massive quark models 157

Chapter 8 Coloured Quarks 159

8.1 Symmetric quark model 159
8.2 Charges of coloured quarks 160
8.3 Colour and $\pi^0 \to 2\gamma$ decay 162
8.4 Colour as a symmetry 163
8.5 Further reading 167

PART 2 DEEP INELASTIC PHENOMENA AND PARTONS

Chapter 9 Lepton Scattering and Partons 171

9.1 Electron scattering 172
9.2 Deep inelastic scattering and partons 182
9.3 Scaling, the impulse approximation and confinement 189
9.4 Scaling and pointlike structure 191

Chapter 10 Some Assorted Topics in Parton Models 199

10.1 Old-fashioned perturbation theory and the infinite momentum frame 199
10.2 The Drell–Yan–West relation 206
10.3 A qualitative introduction to the nonperturbative parton model 208
10.4 The massive quark model 211
10.5 Infinite momentum frame derivation of the covariant non-perturbative parton model 213
10.6 Parton models and field theory 216
10.7 σ_S/σ_T in the naive parton model 221

Chapter 11 Quark–Parton Phenomenology 223

11.1 Electron scattering from nuclei 223
11.2 Quark partons and lepton scattering 226
11.3 Neutrino interactions 236
11.4 Quark distribution functions 246
11.5 Scale invariance in electron–positron annihilation 250
11.6 Charm production in νN and eN 255
11.7 Neutral currents 259
11.8 Scaling violations 263

Chapter 12 Inclusive Production of Hadrons and the Quark–Parton Model 265

12.1 $lN \to l'h \ldots (l \equiv e, \mu, \nu)$ 265
12.2 The quark fragmentation functions 268
12.3 Angular distributions of hadrons produced in e^+e^- annihilation 281
12.4 Angular distribution of hadrons in $e^+e^- \to h+$ anything and polarisation of the beams 286

Chapter 13 Polarised Electroproduction 294

13.1 Kinematic preliminaries 294
13.2 Physical interpretation of A in the parton model 297
13.3 $x \to 1$ behaviour 302
13.4 Inclusive hadron production in polarised electroproduction 305

Chapter 14 Large p_T Phenomena 306

14.1 Basic picture of a large p_T process 307
14.2 Hadron production at large p_T 310
14.3 Some familiar parge p_T examples 312
14.4 Specific models for $ab \to cd$ and $AB \to CX$ 318
14.5 An example of $q\bar{q}$ fusion: the Drell–Yan process $pp \to \mu^+\mu^- \ldots$ 320
14.6 Constituent interchange 326

PART 3 FIELD THEORIES OF WEAK-ELECTROMAGNETIC AND STRONG INTERACTIONS, NEW PARTICLES AND RECENT DEVELOPMENTS

Chapter 15 Introduction to the Phenomenology of Non-Abelian Gauge Theories 331

15.1 Non-Abelian gauge theories of weak-electromagnetic interactions 332
15.2 Quantum chromodynamics: a non-Abelian gauge field theory of strong interactions 336

Chapter 16 The New Particles 348

16.1 Charmonium 348
16.2 Charmonium decays in quantum chromodynamics 354
16.3 The charmonium spectroscopy 364
16.4 Charmed particles 376
16.5 Weak decays of charmed hadrons 381

Chapter 17 Hadron Mass Shifts in Field Theories 386

17.1 Fine and hyperfine structure in atomic and quark physics 386
17.2 Spin-dependent mass splittings for baryons 387
17.3 Fermi–Breit Hamiltonian in QCD 396
17.4 Spin–spin splitting and meson spectroscopy 398
17.5 Electromagnetic mass shifts 400
17.6 Gluon contributions, pseudoscalar and vector meson masses 405

Chapter 18 Quarks Confined to a Sphere: The MIT Bag Model 410

18.1 Free quarks confined to a sphere 411
18.2 Gluons in the bag and hyperfine splitting 421
18.3 Act of confinement 426
18.4 Glueballs 426

Chapter 19 Multiquark Hadrons 429

19.1 $q\bar{q}$ and qqq states in QCD 429
19.2 Colour singlet $q^2\bar{q}^2$ mesons 430
19.3 The spin-dependent splitting of $q^2\bar{q}^2$ states 436

Chapter 20 Quark–Lepton Unification 442

20.1 Quarks and leptons 442
20.2 Grand unification 445

Bibliography 449

References 453
