Outlook

1 Contents

1. Path Integral: ch.9
    - Path Integrals in QM
    - PI Quantization of Scalar Fields
    - Spinor Field*
    - Symmetry and Ward-Takahashi Identity
2. Renormalization: ch10, ch12

- Power Counting
- Regularization
- Renormalized Perturbative Theory: General idea for Counter terms
- Renormalization of $\lambda - \phi^4$, Yukawa*, QED*
- Renormalization and Effective Theory: Wilson's Approach
- Callan-Symanzik Equation
- Running of coupling

3. Gauge Theory: ch.15, ch 16
    - Global and local symmetry.
    - Gauge Field
    - Quantization
4. QCD: ch.17
5. Anormalies: ch.19
6. SM: ch.20, ch21

2 Reading

- *Field Theory, a path integral approach*, by A. Das. PI
- *Gauge Fields, introduction to quantum theory*, by L. D. Faddeev and A. A. Slavnov. QU
- *Foundations of Quantum Chromodynamics*, by T.Muta. QCD
- *Gauge Theory of Elementary Particle Physics*, by T. P. Cheng and L. F. Li. EWSM
- *Gauge Field Theories*, by S. Pokorski
- *Quantum Field Theory*, by M. Srednicki
- *Quantum Field Theory in a neutshell*, by A. Zee
- *The Quantum Theory of Fields* vol1-3, by S. Weinberg
- 基本粒子译文集（1-4）, by
