The Foolish Old Man Removed the Mountains

Taihang and Wangwu were two big mountains in the south of Jizhou and north of Heyang. They were seven hundred *li* around, and ten thousand metres high. An old man lived on the north side of the mountains. He was 90 years old. People called him the Foolish Old Man.

The mountains stood in his way to the south. He was very unhappy. So he said to his family, "Shall we work together to remove (搬掉) the two mountains? Then we can go straight to the south." They agreed to his idea.

The Foolish Old Man and his sons began to break rocks and dig earth. They carried the rocks and earth in baskets to the seaside of Bohai. One trip to the sea took them a long time. They left in winter and came back in summer.

Another old man lived by the river. People called him the Wise Old Man. He laughed at the Foolish Old Man and said to him, "How unwise you are! You are old and weak. You cannot even pull out a tree from the mountains. How can you remove them?"

The Foolish Old Man said, "You don't understand. When I die, there will be my sons, and my sons will have their sons and grandsons. The family will carry on, but the mountains will not grow. Why can't we remove them?"

微信公众号：电子课本大全

The God of Mountains heard the Foolish Old Man's words. He reported the whole thing to the Heavenly God. The Heavenly God was touched (被感动的). He ordered the two sons of Kua'ershi (夸娥氏) to remove the two mountains.

Lesson 8

Can you read?

Why Are People of Different Colours?

All skin colours come from melanin (黑色素). Our body makes melanin to protect our skin from the sun. People with more melanin are darker and those with less are lighter.

People in hot areas developed (生长) more melanin because dark skin helped protect against the sun and skin cancer. In colder countries, people developed lighter skin because they did not face the same kind of pressure to protect themselves from the sun. If your parents came from sunny places, you were born with more melanin and darker skin. If your parents came from less sunny places, you were born with less melanin and lighter skin.

Put a bandage around your finger on a sunny day. Take it off a few days later. Did that part of your finger make any melanin? No! The bandage blocked the sun from the skin. When sunlight hits your skin, melanin comes to protect it, and gives you a tan.

Task 1

Tick(√) or cross(×).

( ) 1. Darker-skinned people have more melanin than lighter-skinned people.

( ) 2. Dark skin can help protect against the sun and skin cancer.

( ) 3. If you were born in a hot and sunny place, you would have darker skin.

( ) 4. Our body can produce melanin without sunlight.

What will your finger look like after you remove the bandage several days later?

B. 

C. 

Task 3

Task 4

1. Why do the Chinese people have darker skin than most people in Northern Europe?

_____

2. Why do the Chinese people have lighter skin than many people in Africa?

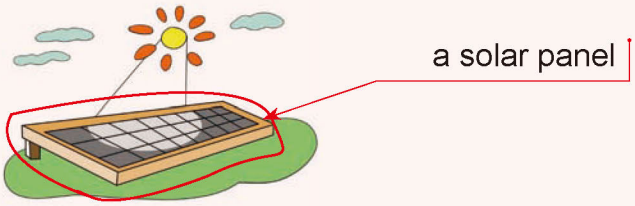
There are many kinds of energy (能), including light, heat, electricity, and sound. One kind of energy can also change into another.



Solar energy

Heat from the sun warms the air, land, and sea. Plants use the energy in sunlight to make their own food. We can use solar panels to change sunlight into electricity.

Motion energy

When things move very fast such as the wind, they generate (产生) a lot of energy. A wind turbine has blades. The blades turn in the wind to drive a generator (发电机) to make electricity.

Lesson 16

Can you read?

Rainbows are made of sunlight and water. Before and after it rains, there is a lot of water in the air. When sunlight touches the drop of water, the light scatters (散开) and we see all the colours of the rainbow.

Light from the sun colours our world. Light can bounce (反射), scatter (散开), or be absorbed (被吸收). Light is made up from the colours of the rainbow. We see sunlight as white, so when light bounces, it comes back to us the same colour—white. When light is absorbed, it goes away and we see darkness. We see many different colours when light is scattered.

The colours of sunlight are: red, orange, yellow, green, blue, indigo, and violet.

We can make a rainbow with water and sunlight.

Water glass method

1. Place a glass of water on a table in front of a sunny window.
2. Put a piece of white paper on the floor below the glass.
3. Move the glass or the paper until you can see the rainbow on the paper.

Mirror method

1. Place a mirror inside a full glass of water.
2. Make sure the room is dark, and has white walls.
3. Shine a flashlight into the glass, moving the light around until a rainbow can be seen.

CD method

1. Take a CD. Clean it.

Lesson 20

Can you read?

Hello and welcome. Parents, teachers, and friends, thank you for coming!

My name is Li Maomao and it's my pleasure to speak in front of you all today.

I am sure all of us have sweet memories of life at this school. In the first grade, Guoguo and I sat next to each other. We wished we were like the older kids. In the third grade we celebrated Thanksgiving and Christmas with Sara. In the fifth grade we travelled with Mike to Canada and visited his grandma. I still remember the football and ping-pong games we played together. I am truly proud that I was a member of the Peking Opera club, and we won the first place out of 60 schools.

It hurts to realize this period of time in our lives is coming to an end. It hurts more to realize we are going to say goodbye to our dear teachers and friends. Along the path of growth, we were lucky to have our teachers, parents, and friends always standing by our side. Thank you all for helping us come this far.

Now, we are ready for high school. We'll face new challenges, but we are not afraid of them. We'll do our best, and we'll have new teachers and new friends to help us. We are confident in our study and life in high school.

At the end of my speech, I wish you all a happy summer vacation. Thank you, and I'll miss you all!
